

ABSTRACT OF THE DISCLOSURE

This invention relates to a combination therapy that finds utility in the treatment or prophylaxis of infectious diseases, cancers, autoimmune diseases and related conditions. In particular, the combination therapy comprises the administration of a TH-1 cytokine, in particular, IL-18, and an immunogenic composition, in particular, a vaccine, comprising an antigen and a saponin adjuvant. In particular, the invention relates to the use of IL-18 or bioactive fragment or variant thereof and an immunogenic composition comprising a tumour-associated antigen and a saponin adjuvant, for the treatment of preneoplastic lesions or cancer.
